THE
ROYAL
SOCIETY
PUBLISHING

The Royal Society journal portfolio offers a range of publishing options within the areas of ecology and evolutionary biology.

Reasons to choose the Royal Society for your work:

- Articles handled by active, expert scientists
- Efficient and rapid processing
- Rigorous, constructive peer review
- Open access, open data, transparent peer review and Registered Reports available
- High production standards, with no charges for colour figures
- Preprint friendly: direct submission from bioRxiv now available
- Partnerships with Dryad and Figshare
- Wide international dissemination and extensive free access
- Articles promoted via the Royal Society Press Office
- 350 years of publishing experience
- Contribute to a charitable organisation that recognises, promotes, and supports excellence in science

Optional transparent
peer review

BIOLOGY LETTERS

Short, highly-innovative, cutting-edge research articles, reviews and opinion pieces.

Editor-in-Chief Louise Heathwaite, Lancaster University

- Publishes concise research and opinion piece articles of 3500 words (reviews are 5000 words)
- Excellent customer service and fast response times
- Supported by a high profile, international Editorial Board

Scope: Across biology, including ecology, evolution, phylogenetics, and environmental science.

Average receipt to first decision: 23 days

Operating transparent
peer review

OPEN BIOLOGY

Open access journal publishing leading research in molecular and cellular biology.

Editor-in-Chief Jon Pines FRS, Institute of Cancer Research

- Research, reviews, methods and techniques articles, short communications and commentaries
- Welcomes Open Question articles publicising emerging, underfunded areas of biomedical research
- Editorial Board comprising world-renowned scientists

Scope: Broad topics within cell and developmental biology, molecular and structural biology, biochemistry, neuroscience, immunology, microbiology and genetics.

Average receipt to first decision: 32 days

W royalsocietypublishing.org/journal/rsob

PROCEEDINGS B

The Royal Society's flagship research journal publishing outstanding research and high quality reviews.

Editor-in-Chief Spencer Barrett FRS, University of Toronto

- Research and reviews, evidence synthesis and biological science practices articles, invited perspectives, comments, replies and commentaries
- Regular Special Features on timely and important topics
- High profile international Editorial Board

Scope: All biology including ecology, evolution, behaviour, genomics, biological applications and environmental science.

Average receipt to first decision: 20 days

Operating transparent
peer review

ROYAL SOCIETY OPEN SCIENCE

Open access journal publishing original research across all areas of science.

Editor-in-Chief Dame Wendy Hall DBE FREng FRS, University of Southampton, UK

- Assessment on the basis of objective peer review
- Embodying open research principles (open access, open data, open peer review)
- No page limitations

Scope: All of science. Encourages cross-disciplinary research, replication studies and those that present negative results. Welcomes research at the intersection of science, society and policy.

E openscience@royalsociety.org

W royalsocietypublishing.org/journal/rsos

You could be the next Guest Editor. Visit bit.ly/PTBproposals for information on submitting a theme issue proposal.

PHILOSOPHICAL TRANSACTIONS B

Influential themed journal issues across the life sciences.

Editor-in-Chief Richard Dixon FRS,
University of North Texas

- Collections of cutting-edge and thought-provoking articles
- Issues are guest edited by leading authorities
- All articles are invited

Scope: Topics of current importance and general interest within the life sciences, often bridging traditional disciplines.

E philtransb@royalsociety.org

W royalsocietypublishing.org/journal/rstb

INTERFACE

Cross-disciplinary research at the interface between the physical and life sciences.

Editor-in-Chief Richard Cogdell FRS,
University of Glasgow

- Research articles, reviews and reports
- High quality content and originality across disciplines
- Constructive peer review considers the physical and life sciences equally

Scope: Cross-disciplinary sciences, including systems biology, synthetic biology, chemical biology, and bionanotechnology.

Average receipt to first decision: 25 days

E interface@royalsociety.org

The Royal Society

The Royal Society is a self-governing Fellowship of many of the world's most distinguished scientists drawn from all areas of science, engineering, and medicine. The Society's fundamental purpose, as it has been since its foundation in 1660, is to recognise, promote, and support excellence in science and to encourage the development and use of science for the benefit of humanity.

The Society's strategic priorities are:

- The Fellowship, Foreign Membership and beyond
- Influencing
- Research system and culture
- Science and society
- Corporate and governance
