

Bibliometric assessment of global shale gas research 2009 – 2018:

Grey literature list

Annex 2. Grey literature list

Grey literature is defined as research that is not formally published by commercial journal publishers or those with limited distribution namely those not listed in online bibliographic database systems.

Examples of grey literature we collected are: conference papers, pre-print articles, policy documents and working papers and publications from governmental agencies.

The grey literature list does not seek to be exhaustive and was compiled from suggestions from a wide range of individuals during the project. It has been included for general information only. The inclusion of records or papers in the grey literature list does not indicate the endorsement or otherwise for that paper by either the Royal Society or the Royal Academy of Engineering. The accuracy of the title, authors, organisation or date published has not been verified.
