

Can smarter schools power a brighter future?

We wanted to know if adopting eco-friendly solar and wind energy could not only make a difference to the environment and our carbon footprint but also significantly reduce our school energy bills in the long term.

We have discovered that we have the capacity for over 500 solar panels on our school. We will monitor the actual sun and wind power over the next year to see the real potential. With our partners' support and smart technology, we could reduce energy consumption, particularly during the evenings when no one is in school!
