

Research and innovation in the West Midlands

There is broad consensus across the political spectrum to increase total investment in UK research and development (R&D). The Government has committed to meet a target of 2.4% of GDP invested in UK R&D within ten years, and a longer-term goal of 3%. To achieve this, the UK must create a vibrant environment that fosters and encourages research and innovation across public services, universities and business, as well as attracting global investment. But what does delivering this target look like for the West Midlands?

This document provides an insight into the current research and innovation landscape in the West Midlands to inform discussions over how people across the region can have the opportunity to contribute to and share the benefits of R&D investment in the UK.

Where does R&D take place in the West Midlands?

3. Workplaces in the science and technology sector are from Office for National Statistics. 2017 Employees and workplaces in Science and Technology in Local Authorities of the UK, 2016 (user requested data) Data corresponds to figures for 2016. Data released on 17 January 2017. Workplace is defined as local units or branches of an organisation present in the region, and may belong to private, public or charity sector. Science and technology is defined based on SIC07 industrial classification codes.

How is R&D in the West Midlands funded and supported?

R&D is funded and supported in many different ways. This includes direct investment from public, private, charitable and overseas sources, as well as indirect measures that encourage further private investment such as R&D tax credits. Here are some examples.

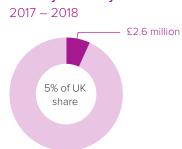

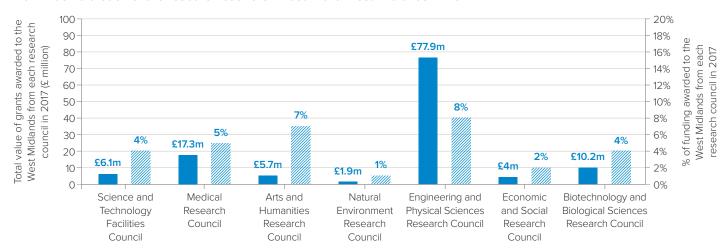

FIGURE 5

How much did each of the research councils invest in the West Midlands in 2017?

Source: Research Councils UK, Gateway to Research, See gtr.rcuk.ac.uk (accessed on 5 March 2018). This graph shows the total value of grants awarded with funding beginning in 2017. These may be spent over a number of years and outside the region via collaborations. Awards made in other years may also be spent in 2017 and are not included here.

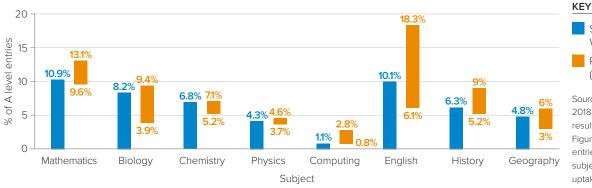

- 8. Higher Education Funding Council for England. 2017 Recurrent grants for 2017-18: Final allocations. Funding refers to quality-related and knowledge exchange funding allocations, including charities support and postgraduate training allocations.
- 9. European Commission. Data obtained from list of organisations funded using Community Research and Development Information Service (CORDIS) via the EU Open Data Portal. Horizon 2020 figures include research projects up to October 2017.
- 10. HM Revenue and Customs. 2017 Research and Development Tax Credits. Figures refer to location of registered office making the claim and it may differ from where R&D
- 11. Research Councils UK. Gateway to Research. See gtr.rcuk.ac.uk (accessed on 5 March 2018). See note in Figure 2 for details.
- 12. Innovate UK. 2017 Innovate UK's 2016/17 funding reports. See https://innovateuk.blog.gov.uk/2017/08/29/innovate-uks-201617-funding-reports-what-do-they-tell-us/ (accessed on 17 April 2018). Figure refers to core grant funding and excludes programmes administered for other organisations.
- 13. Royal Society. The data captures grants expenditure in the 2017-18 financial year limited to UK-based projects, thus not capturing awards made to UK institutions as part of international programmes such as Newton Fund or GCRF awards.

There is no R&D without people

A thriving R&D environment in the West Midlands requires a talented workforce to perform research and young people in the pipeline who are equipped with the skills they will need in the future economy.
